

# Installation Department

If you are opening a new restaurant or just replacing old equipment, Tech-24's installation team is the one to call. With around the clock availability, we are ready to install your equipment when you want it.

Working closely with corporate facility directors and the equipment dealers, we receive, store, deliver, and install all equipment. From small under counter units to massive rooftop air conditioning units (RTU's) and rack systems.

As a Class III CFESA Certified installation company, you can be assured that the job is done to meet all specifications and local codes. This includes pulling any applicable permits, assuring street closures and crane services when needed. With over 20,000 Sq feet of warehousing space, Tech-24 will gladly accept delivery of your newly purchased equipment and store it until you are ready for the installation. No more perfectly timed deliveries are required.

Final connections to existing utilities are also part of the job. Upgrading electrical service, running refrigeration line sets and black pipe gas lines are no problem. When we are finished, your equipment will be fully operational and ready for use.
