

# Plumbing Department

Leaking faucets, clogged drains, and broken toilets are just the beginning to the variety of Plumbing Services provided by Tech-24's Plumbing Department.

Are your drains slow, or completely backed up? Tech-24 comes prepared with equipment for all situations from drain augers to full hydro-jetting services. We are also able to provide drain camera services if needed. This is especially helpful in determining if the problem is yours or your next door neighbor's, or even your local municipality's.

We are frequently called for low or no-water pressure coming to your store. Many times these issues stem from clogged or poorly maintained water filtration systems. Tech-24 stocks name brand water filtration products for all your water supply needs. We also offer full backflow prevention services and inspections if that is the issue causing the problem.

Are mystery leaks haunting your facility? Just one call to Tech-24 brings you the qualified service technicians to search out, identify, and repair all water leaks from waste water, sewer, or supply lines.
